

MedTrak Educational Services

MedTrak Educational Services is a fully integrated, Electronic Medical Record (EMR) and Medical Practice Management Software Educational Service delivered over the Internet.

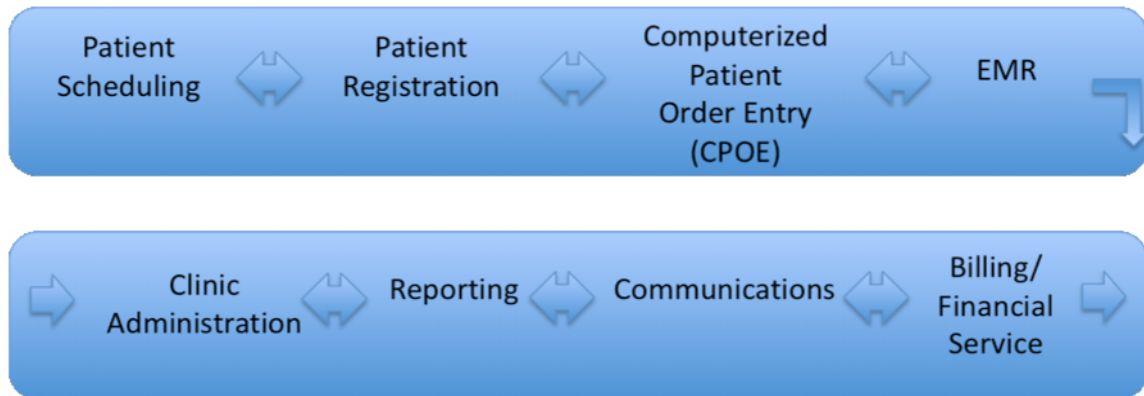

MedTrak Educational Services Benefits:

- **Your students use real-world case studies** drawn from MedTrak's library of millions of patient encounters that demonstrate clinical workflow from scheduling, registration, the EMR, through reimbursement
- **No investment in costly IT infrastructure or personnel is required:**
 - MedTrak is a Web-Based, Software as a Service Product, supported by the IBM e-Business Hosting Center in Chicago
 - As an IBM Advanced Business Partner, MedTrak is a key part of an IBM commitment to apply their emerging Cloud Computing technology to solving today's healthcare challenges. [Read the IBM MedTrak Press Release](#)
 - With other products you have to hire someone to populate the software product and then to maintain it -- this is not needed with MedTrak
 - All that is needed is a high-speed internet connection for each facility and a log-in ID for each student.
- **All MedTrak services are accessible from anywhere that there is an internet connection** -- so that you can utilize our service in seated classes on your campuses and students can access the material from anywhere they wish to study

MedTrak offers the following three Books / Labs:

- **Medical Clinical Workflow**

Using this book and lab, MedTrak facilitates teaching full Medical Clinic Workflow from the EMR to Revenue Access by processing a patient from scheduling through billing:

Our Primary Objective with this book is to:

- Demonstrate how **Clinical workflow systems** can be a significant factor in both **lowering the cost and increasing the quality of medical care** at every level of delivery by **increasing the efficiency of the healthcare facility through a focus on:**
 - Supporting the **collaboration** of the clinical staff
 - **Improving communications:** both inside and outside the medical clinic
 - **Automating paperwork** through completion and approval processes
 - **Fully integrating rules-based problem solving** that triggers evidence-based actions at every step of treatment

- **Billing and Reimbursement**

This book and lab has students use case studies in primary care, urgent care, worker's compensation, employee health, emergency department and orthopedics to create invoices and apply payments to them.

- **Care Pathways**

This book and lab has the student study an example of an acute coronary syndrome care pathway starting from the time the patient arrives at the emergency department until the patient finishes cardiac therapy, and then use MedTrak to build and run their own care study

User Comments:

- **Susan Slajus, RHIA – Davenport University:**
 - “Because of the ease of use, working with MedTrak makes our students more marketable because they can apply their knowledge to other products - thus MedTrak is a better learning tool for Healthcare Technology in general – regardless of the complexity of the product the students will eventually encounter in their real world jobs”
 - “MedTrak did (does) what larger Healthcare (Software/Technology) companies can't do – without hiring (specialized IT) people who don't understand medicine”
 - “Other products force you into their box, MedTrak works in your current box”
